About IXICO

IXICO, the brain health company, was founded in 2004 with a mission to translate image acquisition, management and analysis technology and know-how, which the founders had developed together, into commercial products targeting the expanding area of imaging to inform decision-making during drug development. This has resulted in commercially successful products being launched in the clinical trials (Phase 0-III) and experimental medicine markets and being readied for launch into the wider clinical diagnostic market. Since incorporation, IXICO has been contracted by eight of the top 15 global pharmaceutical companies as well as leading biotechnology companies. In October 2013, IXICO plc was admitted to trading on AIM. More information is available on www.ixico.com
